

ESS - Engineering Software Steyr GmbH specializes in developing simulation software for several industries such as Automotive, HVAC, Oil & Natural Gas, etc. Due to increasing demand on our global presence, we are seeking innovative minds to expand our multicultural team of technical experts.

We Are Hiring!

Automation Engineer

Job Location: Bangalore, India

Job type: Full-Time

Job Description

- Design, implement, and maintain automated test frameworks for both frontend and backend components of our CFD software.
- Develop automated regression tests, performance tests, and integration tests to support continuous development cycles.
- Be part of and contribute to a scalable, automated software validation pipeline.
- Execute, analyze, and document validation and verification cases for new features and releases.
- Support customer projects by translating improvement requests into test scenarios.
- Work closely with developers, CFD specialists, and service teams across multiple global locations.
- Contribute to improving overall software quality, stability, and usability through proactive communication and independent problem-solving.

Requirements

- Bachelor’s or Master’s degree in Computer Science, Information Technology, or related field.
- 2 – 5 years of experience in test automation, including scripting/coding for automated test execution. Must have: Python, TypeScript. Nice to have: C++, JavaScript.
- Familiarity with automated testing of both frontend (UI, UX workflows) and backend (APIs, compute engines, data pipelines) systems.
- Experience with version control systems (e.g., Git) and CI/CD pipelines is a strong advantage.

Offer

- Friendly and flexible working atmosphere with open communication
- Exciting and high-quality technical research
- Perfect platform to bring your innovative ideas and grow from constructive feedback
- Maintain rapid learning curve through new challenges
- Full on-boarding support
